

Title: Software Engineer
Department: Product Engineering
Reports To: Manager, Engineering Services

Position Description

A Software Engineer is responsible for design, coding testing and supporting software components for company packaged products. A Software Engineer works independently on complex software assignments, and may be responsible for portions of a module or component internal design. A Software Engineer receives work direction directly from a senior level engineer or higher.

Position Expectations

- **Responsible design, coding, testing and supporting of individual software components.**
- Participates in product level tasks including product specification, system design, and system integration.
- Leads project tasks including design reviews, detailed design, coding modules, code reviews and unit test.
- Participate in team activities including sales support, early field trials, trouble ticket resolution, reporting and project planning.

Core Competencies

- **Knowledge and experience in Web 2.0 application development (server side and client), Presentation Layer, API's and frameworks such as AJAX, JavaScript, HTML, CSS, etc.**
 - Experience with Dojo JavaScript toolkit a definite plus
- Experience in UI design and interaction requirements (look and feel, information architecture, wireframes, etc.).
- Excellent troubleshooting and analytical skills.
- Good verbal and written communication skills.
- Good human relation skills.
- Experience in OO language such as C++ or Java.
- Experienced with software dev tools including IDEs, debuggers, memory analyzers and code profilers
- Ability to use SQL to validate information presented in user interface.
- Experience with XML and JSON a plus.

Education/Experience

- B.S. in Computer Science or equivalent.
- 2 or more years of OO development experience with C++ or Java.
